

WYANGALA DAM WALL RAISING PROJECT

Project update

Crookwell
May 2021

Agenda

- Acknowledgement of Country
- Introductions
- Project update
- Environmental assessment update
- Engagement
- Connect with us
- Questions

WaterNSW

The background of the slide is a close-up photograph of numerous spherical water treatment media, likely anthracite or similar, in various shades of brown, red, and yellow. Some of the spheres are cracked open, revealing a porous, yellowish interior. In the bottom right corner, there are several long, green, pointed leaves, possibly from a plant like a lily or iris.

Acknowledgement of Country

Background

Since late 2019 we have been developing the project

- Finalising the concept design
- Field work almost complete
- Procurement for a new Wyangala Water Treatment Plant
- Shortlisting of main construction proponents
- Preparation of inputs for final business case
- Engaging with stakeholders, communities and Aboriginal parties
- Establishing a project office

Background

Key benefits

- Increase storage capacity of the dam by 53%
- Significantly improves:
 - **drought resilience**
 - **Water reliability**
 - **flood attenuation**
- Increases capability to manage high inflow/flood events

Confirmed FSL

Confirmed 10m Full Supply Level

- Environmental Impact Statement
- Final business case
- Concept design
- Holiday Park planning work

2021 activities

Environmental field surveys and investigations continue

Landholder engagement continues

Community information sessions and webinars continue

Environmental Impact Statement public display for consultation

Final business case developed

Construction partner procurement

Detailed design starts

Construction of Water Treatment Plant at Wyangala starts

Construction planning for Holiday Parks finalised

New Water Treatment Plant

- 'No regrets' project
- Planning pathway
- Procurement – Enviropacific Services
- Construction & commissioning
- Benefits

Procurement process

Alliance partnership development

- Shortlisted two separate contractors, **Acciona** and **Seymour Whyte** for main construction work
- Appoint successful main construction work contractor
- Start main construction delivery

Construction

Construction staging program

- Dam must remain operational
- Manage operation and construction safety
- Construction is expected to take up to four years

Clay and rock required

- Materials to be sourced locally and as close to project site as possible
- Considering expanding rock quarry used for previous dam construction

Stage 1 - Preparing downstream foundation

Stage 2 – Placing downstream rock fill

Stage 3 – Removing existing dam crest

Stage 4 – Start raising dam wall

Stage 5 – Finish raising dam wall

Construction

Workforce accommodation

- Dedicated local construction workforce accommodation
- Investigating former dam construction workforce accommodation site
- Dedicated workforce between 100 and 300 – additional indirect workforce

Previous construction workforce accommodation

Safety and our approach

- Risk management
- Contractor selection
- Safety expectations
- Behaviours in community
- Working together

Dam Safety Management

- Dam safety risk profile to be maintained throughout
- Dam safety emergency management plans updated to be reflective of the operations and management at each stage of construction
- This will include any modification to the operational (and air space) rules
- Emergency management plans and protocols will be shared with the Local Emergency Management Committee at each stage throughout the project

Environmental assessment

Key features

- 10m increase in Full Supply Level
- Modify spillway to suit new FSL and embankment
- Modify intake towers to suit new FSL
- New saddle dam near the entrance of Wyangala Waters Holiday Park

Further detail

Operation

Flood

- Downstream flood model assess conditions under design storm events under existing and proposed dam operations
- Enhanced operational flexibility to manage flood events

Water quality, cold pollution and algae

- Modify existing towers to provide multiple intake points
- This reduces impacts from cold water pollution

Ancillary work

Ancillary work impact areas and activities include:

- Relocating existing public and private roads and infrastructure (blue)
- New Reids Flat Bridge to be above at least the 1 in 10 flood levels
- Relocating facilities within both Wyangala Waters and Grabine Lakeside Holiday Parks

Environmental update

Specialist studies update

Terrestrial biodiversity
field work complete,
assessment underway

Aquatic ecology
field work complete,
assessment underway

Aboriginal Cultural heritage
upstream field work complete,
assessment underway,
downstream Cultural Values
field work underway

Non-Aboriginal heritage
field work complete, draft
assessment complete

Traffic and transport
assessment underway

Noise and vibration
field work complete, draft
assessment complete

Air quality
field work complete, draft
assessment complete

Health impacts
assessment underway

Contamination and soils
draft assessment
complete

Hydrology
modelling and
assessment underway

Flood
modelling and
assessment underway

**Environmental Sustainable
Development (ISCA)**
draft assessment complete

**Landscape and
visual impact**
draft assessment complete

Social impacts
assessment underway

Waste
draft assessment complete

**Climate change risk
and greenhouse gas**
draft assessment complete

Biodiversity

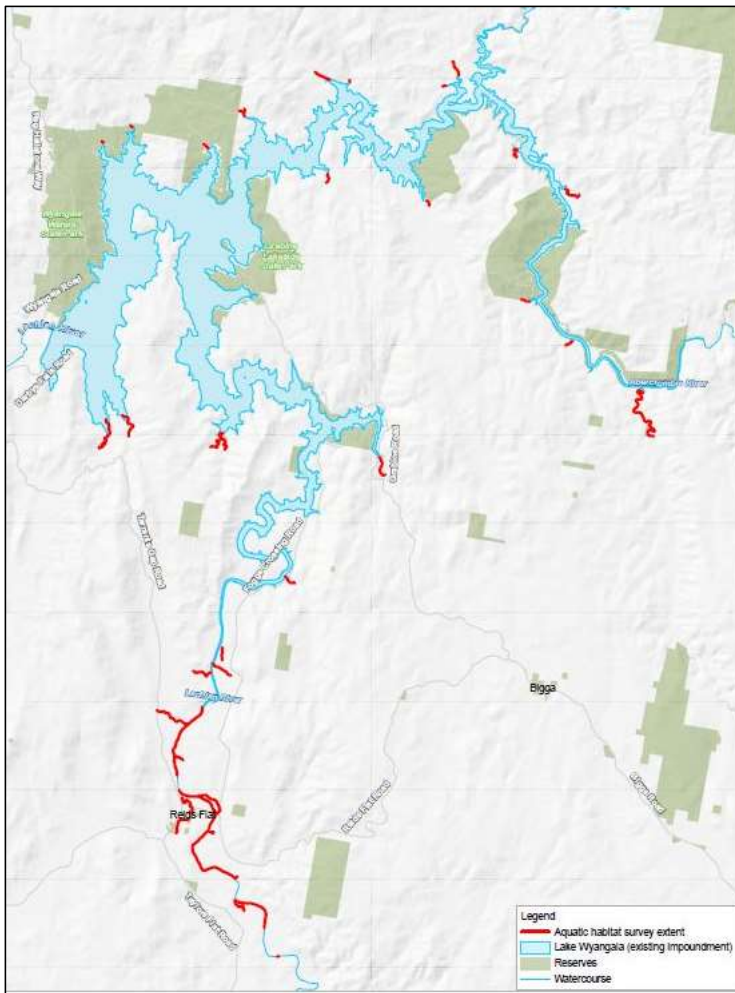

Our approach

- NSW Biodiversity Assessment Method (BAM)
- Producing a Biodiversity Development Assessment Report (BDAR)
- Assessing impacts to listed threatened species and ecological communities, migratory species, and wetlands of international importance
- Targeted flora and fauna seasonal surveys (between April 2020 – January 2021)
- Biodiversity offset strategy – investigations underway
- Department of Agriculture, Water and Environment (DAWE) has determined controlled action (EPBC Act) and assessed under the Bilateral Agreement

Aquatic Ecology

We have

- Used DPI Fisheries data
- Then carried out targeted fish habitat surveys
- Identify habitat potentially impacted
- Consider options to minimise or mitigate impacts to aquatic fauna
- Prepare a detailed assessment
- Develop an offset strategy based on residual impacts
- Ongoing engagement with DPI Fisheries

Heritage and Cultural Values

- Cultural heritage in accordance with DECCW 2010
- 15 Registered Aboriginal Parties (RAPs)
- Update on Aboriginal Cultural Heritage Assessment Report (ACHAR) progress is:
 - Project methodology consultation with RAPs – complete
 - Subsurface test excavations upstream with RAPs – complete
 - Field surveys with RAPs – to be complete 2021
 - Analysis of materials – underway
 - Preparation of an ACHAR – underway
 - Consultation with RAPs and Aboriginal Stakeholders - ongoing
- Cultural heritage survey focuses on values upstream and downstream of the dam – ongoing
- Cultural values interviews with Aboriginal elders, Local Aboriginal Land Councils and RAPs – to be complete 2021

Social impact

What is covers

- Describe existing social environment
- Involve targeted interviews
- Assesses impacts and benefits during construction and operation
- Recommend measures to mitigate and manage identified impacts
- Be prepared in line with leading practice

Note: Cumulative impacts being considered (two construction workforces - the dam and Cowra Hospital)

Construction traffic - routes

- Proposed routes to construction area
 - Primary route to the construction area would be via Darby Falls Road from Cowra and then via a new haulage road across spillway into compound area (blue)
 - Vehicle movement required along green route to provide access to proposed saddle dam construction area and potential clay borrow area (subject to final selection of these areas)
 - Heavy vehicle movements of rock material on a dedicated project haulage route to be developed to avoid movements on public roads (orange)
- Use of Reg Hailstone Way has been identified to be limited to light vehicles only

Hydrology and Flooding

River System Modelling

- What is the day to day behaviour of the river basin system - both existing and proposed
- Numerous inputs
- Outputs relevant to the project

Flood Modelling

- Design storm event based
- Focuses on flood events
- Quantifies downstream hydraulics in more detail
- Represents up to extreme flood events
- Uses field survey
- Includes downstream and upstream

Inundation levels to date

Crookwell

- Impacts on Crookwell are considered to be limited due to the distance to any proposed project work
- Impacts are likely to be limited to construction traffic which would potentially travel through both towns to access work areas at Reids Flat or along Grabine Road
- Movements of heavy vehicles generally through Boorowa.
- Vehicle movements are still being confirmed however these are expected to be limited
- More vehicle movements may be required as part of the relocation of Grabine Lakeside Holiday Park - being assessed at a later date as part of a development application for this work

Traffic – potential mitigation

Mitigation design and construction planning

- Diverting movements off public roads and away from villages
- Completing road safety audit to identify issues along routes

Mitigation during construction

- Construction Traffic Management Plan including traffic control plans
- Examples of mitigation measures used on major projects include:
 - Tracking of vehicles for location and speed
 - Restricting movements at school start and finishing times
 - Moving oversized equipment and plant at night where possible including NSW Police supervision
 - Restricting movements during peak holiday periods

Wyangala Dam Wall Raising

 Improving long term water security and drought resilience in the Lachlan Valley

May 2021

ENGAGEMENT TO DATE

 Local community sentiment
84% support

43 Community events  attendees **419**

 Registered Aboriginal Parties **15**

 **89** Stakeholder briefings

108  Landowner meetings

WHAT'S HAPPENING IN MAY?

- Our quarterly project newsletter will be published for the community, stakeholders and businesses.
- Preliminary Environmental Impact Statement - we are holding early localised input sessions in person 17, 18, 19 and 20 May at Wyangala, Woodstock, Darbys Falls, Reids Flat and Bigga. For event details and to RSVP, [click here](#).
- Our next round of Community Information Sessions will be held in person at Crookwell and online 11, 12, 13 and 21 May . For event details and to RSVP, [click here](#).
